Latex Reagents

The LATEX method:

- has testing technique that allows the detection of an expanded number of antigens and/or antibodies in various types of biological samples: saliva, urine, blood, CSF, etc.;
- has the ability to obtain **semi quantitative results**, acquires results within minutes and interpretation is done visually that can guide the clinician to a probable diagnosis;
- involves low costs and **does not require much of laboratory equipment**.
- the **quality** of our Latex reagents is **continuously assessed** by our quality managers, based on proven competence acquired through the following accreditations: ISO 9001, 151189, 17043 & 13485;
- we test in our lab, **check the quality of each lot of reagents** and compare it afterwards with the result that other laboratories report to the EQA Schemes produced by us;
- for most reagents, we offer 2 up to 4 alternatives from the same analyte**, economical and premium price range.**
